How to install AutoCAD Product Key on a Mac While the Microsoft Windows Operating System is the dominant operating system used on desktop and laptop computers, Apple has a growing presence. Many Macintosh-related software and hardware products are built around the macOS operating system, a modern derivative of the Mac OS (which itself is an ancient descendant of the Apple II). This article will describe how to install AutoCAD on a new macOS system. There are three primary ways to install AutoCAD on a macOS system. These are: Use a pre-built macOS system that comes with AutoCAD installed. The macOS Catalina 10.15 operating system is no longer available to download, but an older macOS operating system, macOS Mojave 10.14.5, can be downloaded and installed. Install AutoCAD from the application store. The AutoCAD app on the Apple Store for macOS is a macOS Catalina build of AutoCAD. It is not free or open source, but is a full version of AutoCAD. Install AutoCAD from your own Mac computer. All of these methods are covered below. Autodesk recommends an upgrade from macOS 10.13.6 to macOS 10.14.5 in order to install AutoCAD. (For the full list of supported systems and hardware, see the AutoCAD system requirements page.) You can also use an existing version of AutoCAD on macOS with a minor version number change. Note: The download links for macOS Catalina or macOS Mojave 10.14.5 will expire on July 29, 2020. (Update July 29, 2020: Links to the macOS Mojave 10.14.5 download now redirect to the macOS Catalina 10.15 download.) Download macOS Catalina To download macOS Catalina, visit the Mac App Store for macOS and search for the application. Choose "Update All" from the download menu. The macOS Catalina installer is over 700 MB and will take a significant amount of time to download. After installation, macOS Catalina will not be immediately available. Your Mac must reboot in order to install the operating system and the installer. Download macOS Mojave If you have a Mac that supports macOS Catalina but not macOS Mojave, you can still download and install macOS Mojave. Download the macOS Mojave installer from the Mac App Store for macOS. Follow the onscreen instructions to complete installation. NOTE: The
