I didn't realize it was Monday... The past few days have been such a blur that I've barely noticed the actual day of the week. After work and the varsity baseball team's workout, I spent all day Sunday doing other things that are normally done on weekends. Continue reading → I've been writing pretty much nonstop lately. Part of the reason is that I'm actually very happy with how my new story, Necromancer, is shaping up. Another part of the reason is that I'm doing a lot of brainstorming for my next project. Today's post features a song I'm working on. The very first verse was a musical experiment. Unfortunately, I found that the farther I get into the song, the less I like the overall arrangement. The truth is, the arrangements are not working for me in the context of the lyrics. Although they work well for the original melody, I'm finding that the arrangements that I came up with for the new lyrics just don't fit. I finally got around to finishing my first death metal album. I'm not sure what makes me feel better about finishing the album (the fact that I've been working on this album for two years) or more upset that the album took so long to do (the fact that the album took so long to do). I tried to keep

UEL supports other protocols such as OSPF, IS-IS, Routing Information Protocol (RIP), and Border Gateway Protocol (BGP), which are used in Layer 3 routing protocols. Common UEL implementations are available for IOS, IBM CICS, and HP-UX. UEL is a significant enhancement of SNMP and has the following advantages: cost-effective, using consistent, well-defined method of contact and operation -2- now allows the agent to use the standardized address and tunnel broker capability of UEL to operate without having to build and deploy a custom agent. implementation and OS neutral, closer to normal operation of Ethernet hardware, and no intermediate agent is required (agent is still required but not installed by the user). UEL allows for standardization in various areas including: the standardization of management access protocols, the standardization of monitoring protocols, the standardization of management notification protocols, the standardization of agent implementations, and the standardization of generic transport layer protocols. In this chapter we have described SNMP and the creation of enhanced SNMP. We covered six types of basic information in a SNMP entity that may be required to monitor and manage a network, and compared some of the security considerations and implementation tips for each type of information. We also discussed enhanced SNMP including UEL. -3-

Such detection has been approached in a number of different ways, including hybridization-based assays such as Southern blotting and in situ hybridization. These hybridization-based assays, however, only detect those sequences that have been previously determined by researchers. Without a previously identified sequence, hybridization-based assays cannot be used. In order to detect particular sequences which have not been previously identified, a variety of methods are used, such as: a) probing with labeled probes using a variety of techniques; b) probing with
