What's new:

Royale Age: Battle of Kings (often abbreviated to Royale in Japan and simply Age: Battle in North America) is a 1999 video game developed by Acclaim Entertainment for the PlayStation. It is a derivative of the Dynasty Warriors series and is its second direct sequel. A year before its release, in 1998, it spawned the Nippon Ichi Software released game for the Game Boy Advance, called Battle Royale. In 2004, an English version was released by Play For Today. Plot In 2201, King Zheng's legendary three kingdom army finally face the imperial army in the battle of Yama City. The significance of the battle is that if Zheng's army wins, the country will end up under the Sharley empire's rule or if the empire wins, they will be able to take over the country. On the day of the battle, King Zheng sets out the rules of war for his men: the enemy men will die, but the women will be spared. Of course, this provokes an outrage from the women, who, in their anger, decide to fight as a team. Thus, starting a battle between the two kingdom armies. In order to establish a stable peace after the war, King Zheng wants to promote Salahuddin to the position of a ruler, but the emperor is unwilling to accept it. However, as the assassination attempt occurred, King Zheng has no choice but to take King Alonso's place. Development and release A version for PlayStation was announced around May 1999 by Namco's official website, and was officially released later in the year. Gameplay The game plays very similarly to the Dynasty Warriors series. It features a similar over the shoulder view. The player now has a new "sphere sight" that works much like an X-Ray in crime thrillers. The player can see enemies' limbs and weak points at a glance. New possibilities to kill enemies have been added, such as the rope swing in Dynasty Warriors. The player also gets the cutlass and rain gem for the first time. Graphics and music Due to the strong similarity to previous Dynasty Warriors games, the graphics are the same as the earlier versions. The game features 2 CD songs in the Soundtrack. The first CD, which plays in the game when starting a battle, consists mainly of remixed stages from the previous games, as well as the first stage of the PlayStation version, Red Castle. The second CD, which plays during normal

Q: How to find the smallest number of sequences with only four characters? There are $10'000'000$ sequences with 4 characters. How to find the smallest number of such sequences? For example, $\$ABCD = (AB)AD(AC)AD(BC)DD\$$ $\$ABCD = (AB)AD(AC)AD(BC)DD \$$ $\$ABCD = (AB)AD(AC)AD(BC)DD \$$

A: If there are $\$10'000'000\$$ sequences with four characters, then there are $\$1'000'000'000\$$ with any number of characters. In a sequence of $\$n\$$ characters, there will be $\$n-4\$$ characters which appear in at least two of the sequences. For sequences of four characters there will be $\$4-4=0\$$ such

characters. The number of n -character sequences which have exactly k of these characters is therefore

$\binom{n+k-4}{k}$ and can be plotted against k and n for various values of k . In particular, for $k=4$ there are only two sequences with the four characters A, A, A, B and B, A, A, B . Since there are 20 sequences with four A characters, there are 20 sequences with four B characters and 20 sequences with four C characters and the result follows.
