
Icom Cs-f14 Programming Software 13

That'd be awesome. Looking forward to the new movies. ----- tedmiston What's the X11/gdk/xcb back-end going to look like for Wayland? ~~~ electriclpsnld X11/gdk/xcb doesn't have to look a thing like Wayland. (Maybe something similar, but I think you'd be asking a lot of the X11 toolchain). Wayland just needs to get the screenscraping and painting bits working, and that's pretty much trivial. ----- kohsuke Does it work on ARM? ~~~ shawabawa3 I'm not sure what you mean by this, but there is a port of MATE to ARM(with Wayland of course): [palmtop](~~~ kohsuke Thanks. I'm asking if he uses Wayland. There's a lot of apps that claim to build for Wayland, but it's hard to tell whether they're trying to build for Wayland or the actual Linux platform. ~~~ shawabawa3 Ah yeah, there is. A lot of people build software targeting Wayland though (e.g. Google Chrome) ----- roddux Just looking for an excuse to get a Raspberry Pi, this is awesome. ~~~ vatotemking This seems like a good way to use the raspberry pi. Add a video camera and you have a very functional video doorbell. ~~~ roddux Good idea, adding an HD camera and a z-wave controller would take this up a level. ----- olomthree Are there any videos out of the Icom booth? ~~~ mceachen Check out the keynote - all of the iCOM's booth demos were shown there. You can replay the keynote on the Icom site, or wait until the keynote and check out the recording here: [
