The AutoCAD API can be used to create "Add-Ins". These are third-party applications that may be used to enhance AutoCAD. Examples are "Siemens PLM" that interfaces with Siemens equipment, and "DynesDraw" that integrates 3D modeling into AutoCAD. Today, the term Add-On is often used for any software product that is designed to be installed after or alongside a base software application. Operating systems AutoCAD is available for the following operating systems: Windows 9x, 2000, XP, Vista, 7, 8, 10 (via AutoCAD LT) Mac OS X (XS/Classic and XE) UNIX Linux Solaris Solaris 10, 11, 11.1, 11.2, 11.3, 11.4 and SPARC OpenSolaris AIX Android iOS OpenBSD FreeNAS Supported drawing models Autodesk's CAD platforms include: AutoCAD AutoCAD LT AutoCAD Architecture AutoCAD Electrical AutoCAD Map 3D The AutoCAD 2009 release provides support for ECW, DWG, DWF, IGES and U.S. Government I/O. I have a large data set that I'm pulling data from another sheet and merging it into this sheet. I only need the first 6 rows of the data, so I don't want the entire table to be loaded. The data I'm pulling contains an integer in column A, and I want to hide any rows with an integer in column A. I've tried using vlookup and 'if statement' to do this, but I'm getting an error on the if statement. Any help is appreciated! Sub Move_Data() Dim i As Integer Range("A6:A13, D6:D13").Select For i = 2 To 13 If Range("A" & i) = "87" Then Range("A" & i).EntireRow.Hidden = True Else: Range("A" & i).EntireRow.Hidden = False End If Next i End Sub A: You should be able to achieve this with a shorter version of the code, like so: For i = 2 To 13 If IsNumeric(Range("A" & i)) Then Range("A" & i).EntireRow.Hidden = True Else Range("A" & i).EntireRow.Hidden = False End If Next i You can refer to this page for more details on how the IsNumeric function works. Also, don't forget to qualify your ranges - so that you're working with the specific sheets and ranges that you have set up in the code.
